Products

Redtop Trapa (Disposable)

Packed in a box of 50, Weight 22.05 lb (10kg) each,
Dimensions: 19.69 in x 18.11 in x 11.02 in
(500x460x280mm)

The REDTOP Trapa is practical and easy to use. It is a 0.79 Gallons (3 litres) capacity disposable fly-trap which is simply thrown away when full. The trap is supplied with bait. The trap folds flat, so is very efficient on shelf space.

REDTOP

Flycatchers

Please follow the below tips when disposing or handing your Redtop Fly Catcher:

- Dispose of old traps on garbage collection day.
- Bait up a new trap 3 to 4 days before disposal of the old one to ensure continuous catching.
- Top up with water when required.
- Water volume should be steadily increased as trap fills.
- Add a tablespoon of local soil to enhance local area organisms.
- For reusable only: Prepare replacement bait in a suitable container 2-3 days prior to changing to ensure continuity of trapping.

WHERE TO HANG YOUR REDTOP FLY CATCHER:

- Not closer than 5 metres from fly breeding areas (i.e., manure heaps, compost heaps, chicken runs, etc.)
- At head height or higher.
- In direct sunlight for temperate climates.
- In semi shade for very hot climates.
- Between the fly breeding area and the living environment.
- Hang the Redtop outdoors in a suitable position with sufficient sunlight. (Not closer than 15 metres from the effected area)
- Suitable for all areas where flies are a problem such as cattle farm, stables and chicken breeding facilities.

Tips

This powerful product is highly effective in the home and domestic environment. Bait last for up to a 6-8 week cycle. Our product is attractively priced and easy to use.

How it Works

How it Works

1

Do you have flies bugging you?

2

Place the trap away (not closer than 5 metres) from the affected area and add bait.

3

Add luke warm water (if water is milky, allow to stand for 24 hours before use).

4

Watch the flies leave the affected area and enter the Fly Catcher. New flies go directly to the trap.

How it Works

How it Works

Exceedingly effective. Ideal for smallholdings, poultry farms, dairies, domestic areas, homes - or anywhere plagued by flies every summer. Low cost, easy to use, disposable, can catch up to 20,000 flies and once trapped they can't escape. Bait is especially appealing to female flies, breaking down the breeding cycle - so reducing the next generation. Simply hang the fly trap away from the areas you wish to protect. Bait lasts up to 6 - 8 weeks.

How it Works

How it Works

There are five main components that make up the Redtop Flycatcher:

- A turret through which the flies enter to get into the trap.
 - A cover dish which is the 'chassis' of the trap.
 - A mesh cone which stops the flies from escaping once inside.
 - A bag which contains the bait and the trapped flies.
 - A powdered bait which is mixed with water within the trap.
- A sachet of bait lasts from six to eight weeks before replacement is necessary.

The bait contains no poisons or harmful chemicals.
