Bird Net Rapido- BN

This is a widely used, non-harmful, professional net proofing system with a long history of effectiveness in many situations on buildings against all species of birds.

It incorporates a UV stabilized knotted polythene net with gauges ranging from 19 mm to 75 mm mesh.

RAPIDO PEST CONTROL

The net is professionally fixed to a framework of steel guide wires that are designed to follow the architectural lines of the building in order help the system remain effective, discrete and durable.

Maintenance access zips can also be fixed to the net where access points are required, such as below lights, security cameras or AC units.

Fixings can be supplied in stainless steel or galvanized steel, depending on the building structure nets can be supplied in a range of colors to suite building design needs.
