

# RAPIDO PEST CONTROL

## Insect Monitoring Trap Rapido-IMT

This folding trap uses a scented glue to lure in all insects and trap them in a quick and easy manner, along with pheromone tablets to attracts the roaches on to the glue.

The trap folds into a discrete monitoring station to provide effective coverage for any room.

With built in sticky pads to allow easy fitting to walls and skirting boards, this monitor can be placed wherever a problem appears.

Insect monitoring gives an excellent indication of the size of an infestation, and can help capture insects for identification, meaning further treatments can be targeted to a specific species.
